Hi Brandon!

Thanks for your JUnit test case commit this week. Hope you have a great fall break ahead.

When you next have time for Spacetime Java, please do a git pull and you'll see lots of changes. There's a chance some of my changes will conflict with edits you have locally.

The most recent commit message is: Worklogs - Meeting on 9/27: Spacetime Maven Github JUnit d3 Demos, Update <https://github.com/ntbrock/spacetime-java/commit/2d290ab4ecb2bb34c5850fc5768ec6b8fd71fc3d>

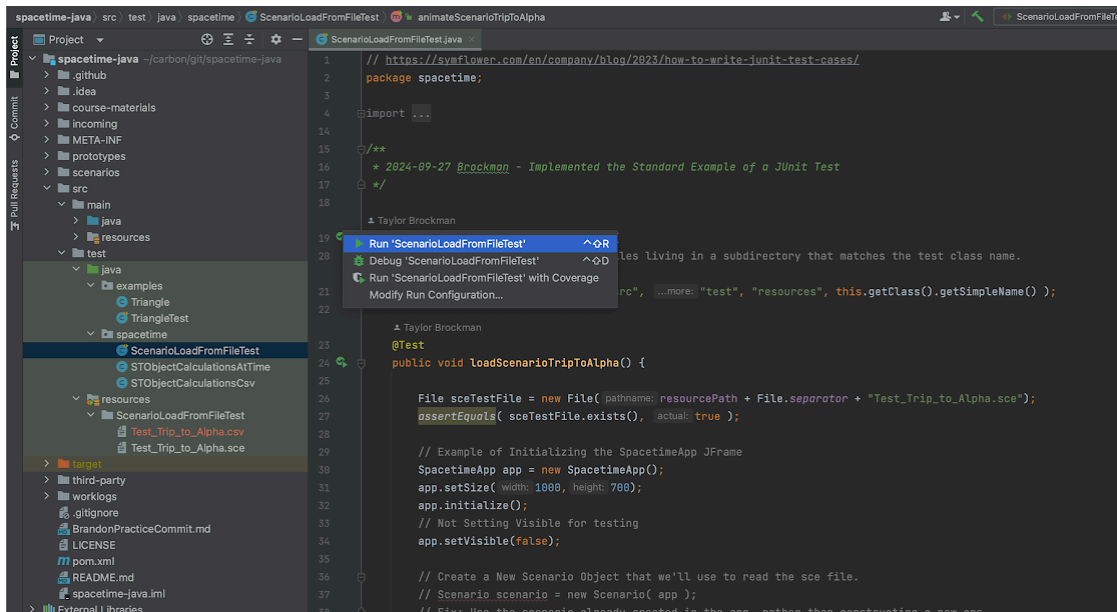

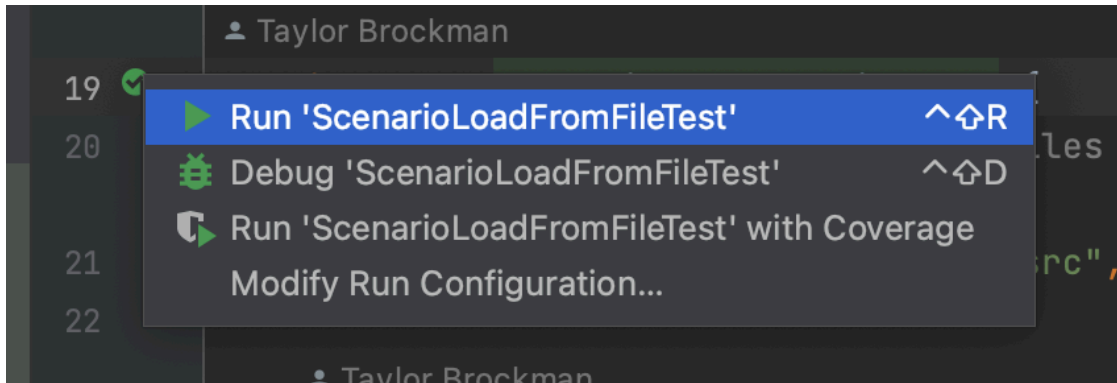

After the pull, I recommend you try to run the TriangleTest class test on Line 11 of the file: src/test/java/examples/TriangleTest, screenshots:

Two test functions should show as passing:

If that works, try running the next test: src/test/java/spacetime/ScenarioLoadFromFileTest, line 19:

This will pop up an animation window as well as write a new CSV file into src/test/resources.

I'm happy to help answer any questions or collaborate on any issues you encounter. Thank you!!

Sincerely,
Taylor
